IDENTITY

The Grigolin Group is composed of a group of companies specialized in all sectors of construction, with integrated solutions for production technologies of a new generation, with a particular interest in respect for the environment, the development of human resources and product quality, thanks to the complete synergy in the integrated management of raw materials, resources, technologies and professionals, to meet the needs of a market in constant evolution.

Fornaci Calce Grigolin is specialized in the production of lime, paints, adhesives and premixed products for the building industry.

Today, Fornaci Calce Grigolin is one of the most important Italian and international players in the building materials and technologies sector. It boasts a complete range of special solutions: lime and derivatives, thermal insulation, substrates and laying of floor and wall coverings, renovation, green building, decoration and finishing, deep foundations and consolidation, binders, mortars and plasters.

FLOORS AND WALLS LAYING

ADHESIVES, SCREEDS, WATERPROOFERS

From lightened substrates to special composition of substrate screeds, from waterproofing solutions to characteristic formulations of tiles adhesives, ending to the high aesthetic look of grouting solutions.

All products have been grouped into 4 lines of high quality, confirming the leading role of Fornaci Calce Grigolin among building materials professionals:

GRIGOKOLL is the summary of research on materials for laying tiles to which Fornaci Calce Grigolin has been dedicated in recent years. The mission is to transfer technologies able to support installers with the best solutions to application problems.

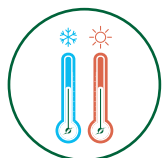

GRIGOKOLL
the Solution you won't stick away

CERTIFIED THERMAL INSULATION

ADHESIVES, SKIM PLASTERS, INSULATING PANELS, COATINGS

Our vast experience and commitment to increase and transfer the know-how resulting from the acquisition, in 2003, of the plant in Germany, has allowed us to develop since 2005 the best solutions for thermal insulation. In our laboratories in Italy and Germany, qualified technicians and researchers study the most suitable products to be used both in new constructions and in renovations with different insulation materials. In the formulation phase we pay particular

attention to the practical aspects with the aim of obtaining products that are easy to work with. The choice of system to be used depends on many factors: thickness available for insulation; intervention on new or existing building; urban/building context; need for high fire resistance or high sound insulation; specific design choices. GRIGOTHERM solutions are complete and designed to offer the best synergy among the products involved.

GRIGOTHERM

DECORATION

COLOURED PAINTS AND COATINGS

The Grigolin brand dedicated to indoor and outdoor finishes combines the emotions provoked by colour in different forms of art: painting, sculpture, furniture, architecture.

The choice of quality raw materials is reflected in the finishes for living rooms or for outdoor decorations in harmony with nature and in perfect compatibility with the environment, realizing the passion that Grigolin puts in all its products.

With a complete range of siloxane, lime-based, silicate-based and acrylic products, arteMURI offers the solutions sought by architects and designers combining quality, research and decoration.

The new ATELIER 502 selection is the result of decades of experience in construction sites and studies carried out by our technical staff and research and development laboratory, that led to the birth of a range of colors with a contemporary taste but also versatile for all interventions on the historical and monumental building heritage.

COLOR YOUR FEELINGS

DECORATIVE STUCCO FOR HORIZONTAL AND VERTICAL SURFACES

Colour, emotion and performance for decorative surface finishes.

Surface coverings, whether in stoneware, natural stone or other material finishes, are decisive in architectural design and modern interior design. Spaces are characterised by the surfaces and elements that compose them, horizontal and vertical planes that convey different perceptions depending on chromatic gradation, textures, dimensions, formats.

FugaStyle is the decorative grouts selection for all aesthetic and performance requirements in the world of surfaces.

Architectural and decorative choices are enhanced by material details on floors and walls.

The joints grout maintains technical performance connecting surfaces, expressing a new aesthetic function, integrated into the design choices and derived from emotions.

CALCECOLOR

COLOUR AND LIME

Lime is the oldest binder known to man and can help us in architectural accomplishments. Lime is a natural material that makes our house more respectful of the environment. Our products, our finishes based on hydrated lime, allow to absorb the CO₂ in their carbonation process, purifying the air and making healthier the environment we live in. Lime is an ancient natural binder that Fornaci Calce Grigolin, for over 60 years, produces with natural raw materials from its own quarries, and cooks in technologically advanced furnaces with continuous cycle, fed with wood and sawdust, with the lowest environmental energy impact.

The tradition of plasters colored with natural earth, with cocchiopesto and “smooth” finishes is resumed and improved in the products PALLADIO CALCECOLOR, plasters and mortars for restoration of buildings of historical and cultural interest, as well as for the decoration of new buildings. PALLADIO Calcecolor INTONACO, ARENINO and PASTELLATO are products based on MICROCALCE, micronized hydrated lime with high purity CL 90-S, produced in the plants of Ponte della Priula and Terracina. Breathable and ecological, they are available with a palette of 30 colors and can also be colored and reproduced by sample, according to any need required by the designer.
